Introduction

- 1.The Online Reservation System is a console-based Java application developed to automate ticket reservation processes. The system allows users to login, reserve tickets, view reservation details, and cancel reservations efficiently.
- 2.The project demonstrates the use of Object-Oriented Programming concepts and user interaction through a command-line interface.

Objectives

- To develop a reservation system using Java
- To implement login authentication.
- To manage ticket booking and cancellation.
- To understand OOP concepts in real applications.

Tools And Technologies Used

- Programming Language: Java
- IDE: VS Code
- Concepts Used: OOP, Loops, Conditions
- Version Control: GitHub
- Operating System: Windows

System Features

- User Login Authentication
- Ticket Reservation
- View Reservation Details
- Ticket Cancellation
- Logout Functionality

System Working

- User starts the application.
- System asks for User ID and Password.
- After successful login, menu options appear.
- User selects reservation or cancellation.
- System processes request and displays result.
- User can logout safely.
